

Future Education Switzerland

In the future, over two thirds of a class should gain a qualification for tertiary education. At the same time the development of interpersonal skills need to be supported. Education should not just provide the knowledge to perform professional duties; it should also provide a deeper understanding in order to deal appropriately with the world and society. This is what the Swiss Academies of Arts and Sciences are proposing in their under the lead of SATW established white paper “Zukunft Bildung Schweiz” (Future Education Switzerland). It defines the requirements on the Swiss education system in 2030 using a scenario to describe the future understanding of education in Switzerland. Based on this it makes recommendations on the Swiss education strategy and describes its implementation in a roadmap.
